IRB APPROVAL: DSREC-06/2025_10

ERECTILE DYSFUNCTION

- Multifactorial Inflammatory Condition
- Current therapies only offer symptomatic relief
- Focused SWT & LP-PRP combination therapy emerging
- Evidence suggests potential for blood flow improvement

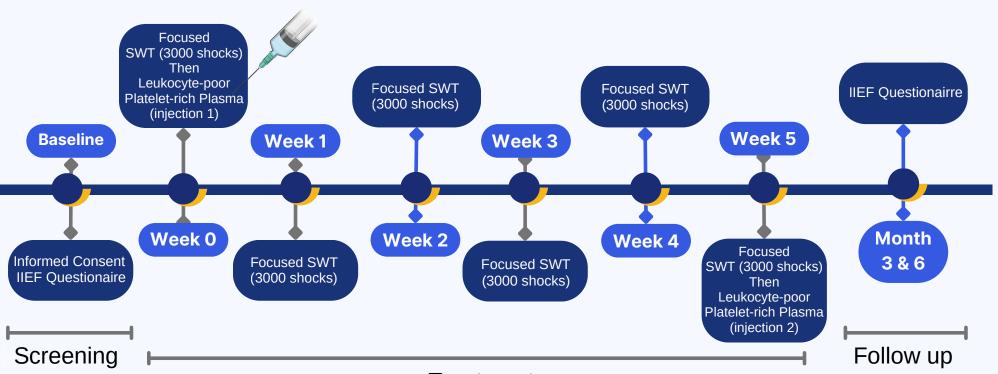

STUDY OBJECTIVES

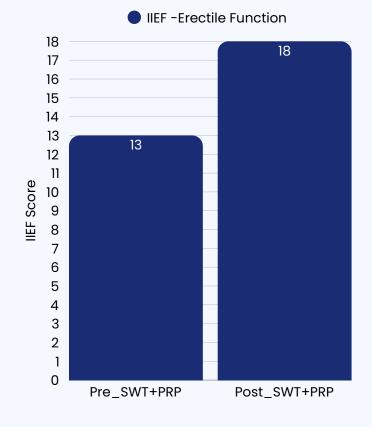

EVALUATE IF FOCUSED SWT + LEUKOCYTE-POOR PRP IMPROVES ERECTILE FUNCTION (VIA IIEF SCORE).

ASSESS SAFETY AND TOLERABILITY (NO ADVERSE EFFECTS, FIBROSIS, OR PLAQUE).

STUDY DESIGN AND METHODS

- > Patient enrollment
- > Focused Shock Wave Therapy
- Leukocyte Poor PRP Administration
- > Tadalafil Supplementation

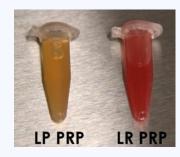

Treatment

PLATELET RICH PLASMA

Lidocaine cream and
10 minute Tourinquet
6 cc of leukocyte-poor PRP
(3 cc per side) to be injected
distally

FOCUSED SHOCKWAVE THERAPY

	IIEF Score (0-25)	Energy Density (mJ/mm2)	Emission Frequency (Hz)
	Mild ED (14-20)	0.10	5 Hz
	Moderate ED (7-13)	0.15	4 Hz
	Severe ED (0-6)	0.20	3 Hz
