MANAGEMENT OF INCONTINENCE BY ORIENTAL MEDICINE: A CASE STUDY OF THAI-CAMBODIA LOCAL WISDOM, DONGRAK MEDICINE

Hypothesis / aims of study

The present work described the case studied on local wisdom, oriental medicine in a specific area of Indochina; Thai-Cambodia border that can be applied to the topic of "incontinence"

Study design, materials and methods

The data collection is from field study. Survey and quality research was done for collection of local wisdom on Thai-Cambodia local wisdom, Dongrak medicine.

Results

There are several identified local wisdoms that are very interesting. All have the socio-ethnic background that can be explained by theory of medical ethnology.

Interpretation of results

Based on the medical ethnology principle, factor analysis can show the component of bio, psycho, social and spiritual aspects of local wisdom Thai-Cambodian border area medicine system. The application to correspond the problem of "incontinence" can be seen and this is the actual new knowledge in medical ethnology and incontinence science.

Concluding message

Local wisdom in Thai-Cambodia border medicine can be identified and correspond for the "incontinence". Further in depth study to detailing and verifying the local wisdom is suggested.
