The presentations challenged my thinking	33	16	17	0	0	Agree
The speakers identified important issues	33	19	14	0	0	Strongly Agree
There were ample opportunities to ask questions	32	18	14	0	0	Strongly Agree
The speakers thoroughly answered participants' questions	32	19	13	0	0	Strongly Agree

Would you recommend the course to a colleague **Yes=34 No=0**

If no please explain your answer

ICS Education course in conjunction with IUGA

Did you receive sponsorship for this course Yes= 5 No= 29

Should we conduct a similar course in the future? Yes= 29 No= 0

What was the strongest aspect of this course	What was the weakest aspect of this course	What if anything, should have been included that was not?	Do you have any suggestions for improving the next course?
Open-Ended Response	the audience was wrong as fisiois cannot assess vaginal trauma	samples of pessaries to examine	testimonials of patients 'discover your pelvic floor age test for each delegate would have been interesting too long in terms of full afternoon session- difficult to concentrate on presentations maybe another form of presenting, more practical participation
emphasis on the 'problem' of incontinence and importance of treatment	spoken english very fast	speaking to people with urinary incontinence	the workshop was a bit too long suggestion it could be a 2 day period, more nurses should attend this workshop
information given about different pessaries and when it should be used	no practical component, so do not equip you to go and treat patients	if course was longer practical demonstrations on patients	more people must come
very detailed info reassessment and treatment	parking	looking forward to the neo-natel course over the weekend	include urogyns, widwives, nurses in further clincis
diversity of views	time	practicals	it was a workshop more than a course due to time restrictions
Quite comprehensive covering of basic aspect	large topic, short time hence not enough depth	could extend it to invite obstetricians and more midwives	parking was a problem
introducing new ideas		good to know SA physio is on a par with international practice	is possible more discussion around pelvic floor imaging
excellent well prepared speaker			Thank you for providing us with this exposure to international trends

ICS Education course in conjunction with IUGA

Pessary education as it was the information I was most unfamiliar with, presenters did well to present this info in a short space of time			Would like more insight/depth
having a multidisciplinary approach including nursing management			
The approachable presenters- thank you lesley and julia
