Aims of course/workshop
The approach of female sexuality dysfunction is still controversial in literature, even if physicians and physiotherapists nowadays pay more attention to this problem and the patients are demanding for more information.

The purpose of this workshop is to bring more comprehension of sexual dysfunctions based on evidences and experiences of physicians and physiotherapists.

The physiotherapeutic treatment is still unknown to the majority and the demonstration of those techniques is essential to give more therapeutic options with medical treatment.

The intention of this is to create a method in which professionals of distinct areas will be able to act more efficiently.

Learning Objectives
1. Recognize the functional anatomy and physiology of female pelvic organ support and the sexuality repercussion's of the changes induced by pregnancy and postpartum and aging.

2. To comprehend better the female sexual dysfunction based on evidences

3. To know the right approach to treat these dysfunctions according to physicians, physiotherapists and sexologists
ICS 2015 Montreal

W2 Multidisciplinary Approach to Female Sexuality Based on Practical Concepts
Tuesday 6th October 2015
09:00-10:30

The most important physiotherapeutic techniques - Authors video 3: Maura Seleme and Bary Berghmans

Sexual Dysfunction 25% to 63% of women

Sexual Dysfunction in the United States
Prevalence and Predictors
Edward O. Laumann, 2009

Sexuality and Pelvic Pain

In general human sexuality has three aspects – sexual function, sexual self-concept, and sexual relationships.

Pain can affect self-esteem, one's ability to enjoy sex and relationships.

Healthy sexuality is a positive and life-affirming part of human being.

“Patients who reported having sexual, physical or emotional abuse show a higher rate of reporting symptoms of pelvic pain and sexuality”

The European Association of Urology (EAU) Guidelines

Sexual dysfunction and PFM

- Related to female sexuality the pelvic floor muscles are extremely important.

Basson et al 2000
Bourcier et al 2004
Rockwell 2002
Sexual dysfunction and PFM

The musculature is involved in the woman sexual response physiology and physiopathology.
The collaboration among physiotherapists, gynecologists, and sexologists is highly recommended.

Bo et al 2007
Graziottin 2007

Assessment: history taking

Basic principles for sexual history-taking

- allow the patient to feel in control
- provide explanations for answers
- help the patient feel less abnormal (destigmatize)
- provide encouragement and positive support
- initiate the discussion of sensitive topics
- defer sensitive questions
- be aware of patient's cultural background
- ensure confidentiality
- avoid judgmentalism

Gregoire A 1999

What is wrong with you ?? What do you expect from me?

International Classification of Functioning, Disability, & Health 2002

organ level = impairment
personal level = disability
social-cultural level = restriction in participation
consequences!!

Assessment: history taking

associated pathology - diabetes, obesity, lower back pain, SDT - sexually transmitted disease, depression, neurological disease, medications
urogynecology - age of sexual initiation, infection, menopause
anorectal - constipation, hemorrhoids, anal incontinence
surgery? - hysterectomy, prolapses
obstetric history - episiotomy, vaginal delivery, baby weight

Urinary behavior

Frequency:
day:_______ night:_______
( ) dysuria ( ) abdominal strength
( ) difficulty to control urine
( ) urgency ( ) pain
( ) burning feeling
Urinary incontinence

Start Date: ______________________

Incontinence ( ) daytime
( ) nighttime

With some effort ( ) urgently ( )

Which kind of urinary incontinence?

Pain

- deep into pain history:
  - site of pain confirmed by pain diagram
  - duration of pain
  - nature of onset or precipitating event
  - pain characteristics
  - response of pain to activity and associated symptoms

Hopwood 2000

Visual analog scale

Every session:
Session 1:
Session 2:
............
Last session:

Assessment: FSFI most used

- Female Sexual Function Index (FSFI) – 19 questions about sexual feelings (desire, arousal, satisfaction, orgasm, pain)

Before start the treatment...

- Following initial evaluation, all patients should be provided with a detailed review of findings and explanation of the nature and likely causes of their problem

- if the initial findings do not preclude direct treatment for the sexual problem, patients should be informed as to the available treatment options and the likely benefits and disadvantages or risks of each option

- patients should always be encouraged to participate actively in the decision-making process – motivation!

Guidelines in Sexual Dysfunctions?
Breathing exercises

Antervation and retroversion

Hot Bag

Yes, we can start to talk.....

The 4 Fs

- F = find 
- F = feel 
- F = force 
- F = follow through

- Find the pelvic floor
- Feel the pelvic floor
- Force the pelvic floor
- Follow trough, keep exercising
Information!

- Information anatomy & PFM

Find perineum

- Digital palpation – show before the examination anatomy with anatomical board to localize PFM and pelvic organs

EXPLAIN & EDUCATE!!!!

Find and Feel the perineum

- Digital palpation – show before the examination anatomy with anatomical board to localize PFM and pelvic organs

EXPLAIN & EDUCATE!!!!

Find and Feel in different positions
**For increasing the perception Feel**

- Lying position on the side
- Sitting position
- Standing position

Always ask for a selective contraction of the pelvic floor muscles

**Use evidence-based program!!!!!**

PFM training – SUI level 1, grade A [ICI 2012]
- 8-12 MAXIMAL contractions – inward & upward
- 6-8s contraction & relaxation
- 4 fast contractions – 8s of relaxation
- 3 sustained contractions 20s

**Trigger Points**

Anderson et al 2009

**PFMT and female sexual function**

Promising results of PFMT on sexual function
Duration of training: minimum 8 weeks [Bo 2012]

**Selectivity PFM contraction**

> 30% of women do not contract their PFM correctly at their first consultation, even after thorough individual instruction [Benvenuti et al 1987, Bump et al 1991, Bø et al 1988]
Guidelines in Sexual Dysfunctions?

Physical examination shown by movies produced by abafi-HOLLAND 2014

Seleme, Berghmans, Uchoa 2014

Guidelines on Stress Urinary Incontinence - Royal Dutch Society for Physical Therapy (KNGF) – 2011

Invasive Techniques

Guidelines on Stress Urinary Incontinence - Royal Dutch Society for Physical Therapy (KNGF) – 2011

Electrotherapy

- GOAL!
- It can be used to reduce the pain:

**TENS**

Conventional TENS: It will be responsible for the pain "gate closing". Frequency between 90 e 130 Hz.

**Chronic pain !!!!!**

TENS Endorphin liberation—besides stimulating the liberation of β-endorphin, it also causes the muscle fiber relaxation, toxins removal and local metabolism improvement. To do so, it is used frequency always lower than 10 Hz and impulse duration around 180 up to 250 μseg.

**Acute pain !!!!!!!**

Fall & Madersbacher 1994

Use evidence-based program!!!!!!

PFM training – SUI level 1, grade A ICI 2012

8-12 MAXIMAL contractions– inward & upward
6-8s contraction & relaxation
4 fast contractions– 8s of relaxation
3 sustained contractions 20s
Manual therapy and sexual dysfunction

Myofascial Training Effects:
- Relaxation
- Enhanced flexibility
- Increase of blood circulation
- Pain reduction
- Sensory perception
- Scar tissue manipulation
- Reduction of fibrotic adhesions
- Reduction of hypertonicity

---

Trigger Points

Anderson et al. 2009

---

Biofeedback & Sexual dysfunctions

As for other pelvic dysfunctions we may deduct that biofeedback provides:
- Larger perineal muscles perception.
- Progressive increase or reduction of the muscle activity (Hypoactivity or hyperactivity)
- Neuromuscular re-education +++ use of antagonists
- Relaxation – as important as the work

---

Biofeedback through manometry

Biofeedback through manometry – a good device, can be useful for sexual physiotherapeutic treatment (allows better adaptation to the vaginal canal size, muscle stretching on the big opening)

Dabbade at al, 2005
Biofeedback through EMG

- Biofeedback through EMG – nowadays it can be as stable as the pressure registration.
- It allows the use of small probes, applying biofeedback and electrotherapy at the same time (ideal on dyspareunias).
- It doesn’t allow variables of muscle stretching and can be modified according to hormonal impregnation and vaginal opening size.

Dabbadie Seleme, 2005

Receive the action
Potential of the Motor Unit Muscle fiber
depolarization - contraction - repolarization – rest
Binder, 2002

Biofeedback

Vaginal Cones

- Theory: the cone weight intend to motivate the training so that the women contract firmly with progressive weight.
- Use Period (15-20 min) adequate
- It can cause ↓ blood supplement ↓ O2 consumption, fatigue & muscle sore
- Synergist contractions instead of MAPs contractions
- Refined protocol if used as BF

Desensitization - Dilators

Vaginismus

Due to the scarcity of studies found, no metanalysis was done, only a critical review. No consistent evidence could thus be found on satisfactory clinical physical therapies for vaginismus.

Aveiro et al 2009

Conclusion

Rehabilitation Techniques
Thank you very much!
